

## #1 Fundamentals of Data Management

2019HS2 | 101624964 | Jimmy Trac

Pass Task 7.1.3

Counting the number of Customers per State:

```
1 SELECT COUNT(*) as NumCustomers, CustState
2 FROM Customers
3 GROUP BY CustState;
```

The screenshot shows a SQL query editor interface. The top toolbar includes icons for file operations, a lightning bolt, a magnifying glass, a refresh icon, a 'Limit to 50000 rows' dropdown, a star, a trash can, a search icon, and a table icon. The query editor contains the following SQL code:

```
1 • SELECT COUNT(*) as NumCustomers, CustState
2 FROM Customers
3 GROUP BY CustState;
```

Below the query editor, the results are displayed in a table. The table has two columns: 'NumCustomer!' and 'CustState'. The results are as follows:

#	NumCustomer!	CustState
1	7	CA
2	4	OR
3	6	TX
4	11	WA

The bottom toolbar includes a 'Filter Rows' button with a magnifying glass icon, an 'Export' button with a document icon, and a 'Wrap Cell Content' button with a text box icon.
