

Fundamentals of Data Management

— 2019HS2 | 101624964 | Jimmy Trac

Past Task 3.1.3

Modifications made:

The foreign key used is the **Convenor_ID** from the **Convenor** table as that is a more suitable Key over the **convenor** name:

- Names are, in general, a bad idea as a Primary/Foreign key
- A subject can only have one convenor
- Convenors can have many subjects
